Ref: permits required for garage door installations.

Dear contractor and homeowner,

The 2020 MN State Building Code requires that garage doors installed in Minnesota must be designed and installed to resist 90 mile per hour winds. Due to these regulations the City of Owatonna requires building permits for the installation of residential and commercial garage doors. The door required to be a labeled door indicating compliance with the 90 mile per hour wind speed requirement. The installations will require a final inspection to verify the installation is per building code and the manufacturer's installation instructions.

Please take a moment to obtain a building permit online and schedule a final inspection for the completed installation. At the time of inspection a copy of the manufacturer's installation instructions will need to be provided to the inspector. These instructions typically come in the bag of parts needed to assemble the garage door.

Thank you for your cooperation in these installations. Should you have any questions or need to schedule inspections, please contact the Building Inspection Division at 507-444-4370 or e-mail us at inspect@ci.owatonna.mn.us
